## **DETAILED ACTION**

### Information Disclosure Statement

1. The information disclosure statement filed 6/14/2004 fails to comply with 37 CFR 1.98(a)(1), which requires the following: (1) a list of all patents, publications, applications, or other information submitted for consideration by the Office; (2) U.S. patents and U.S. patent application publications listed in a section separately from citations of other documents; (3) the application number of the application in which the information disclosure statement is being submitted on each page of the list; (4) a column that provides a blank space next to each document to be considered, for the examiner's initials; and (5) a heading that clearly indicates that the list is an information disclosure statement. The information disclosure statement has been placed in the application file, but the information referred to therein has not been considered.

## Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claim 17 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 17 is directed to a computer program and computer programs claims as computer listings per se are neither computer components nor statutory processes, as they are not "acts" being performed. A claimed computer-readable medium encoded with a computer program is a computer element,

Application/Control Number: 10/780,621

Art Unit: 2182

which defines structural and functional interrelationships between the computer program and the rest of the computer which permit the computer program's functionality to be realized and is thus statutory. Suggested embodiment would be a computer storage medium having a control program for information processing apparatus when executed by a computer to perform the method according to claim 9.

4. To expedite a complete examination of the instant application, the claims rejected under 35 U.S.C 101 (non-statutory) above are further rejected as set forth below in anticipation of applicant amending these claims to place them within the four statutory categories of invention.

# Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1-6, 9-14, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Pierre Bertin et al. (US Publication Number 2002/0029090, hereinafter "Pierre").

Art Unit: 2182

- 7. As per claims 1, 9 and 17, Pierre teaches an apparatus, method and program for an information processing apparatus capable of communication with an external unit connected thereto via a connection unit (decoder, element 1, figure 2), comprising: a first control step of controlling communication between said connected external unit and said information processing apparatus (first connector, element 11, figure 1A, B, 2); a second control step of controlling communication between said connected external unit and said information processing apparatus (second connector, element 12, figure 1A, B, 2); and a switching step of selecting said first control step or said second control step as a control step of controlling communication between said connected external unit and said information processing apparatus (switching circuit, element 13, figure 2)
- 8. As per claims 2 and 10, Pierre teaches an apparatus and method wherein said switching step has: a determination step of determining the type of said connected external unit; and a selection step (two positions, lines 1-2, paragraph [0031]) of selecting said first control step (first position, lines 2-7, paragraph [0031]) or said second control step (second position, lines 7-12, paragraph [0031]) as said control step for controlling the communication between said external unit and said information processing apparatus, in correspondence with the determined type of said external unit (paragraph [0031]).
- 9. As per claims 3 and 11, Pierre teaches an apparatus and method wherein said first control step is a device control step, and wherein if it is determined at said

Application/Control Number: 10/780,621

Art Unit: 2182

determination step that said external unit is a USB host unit in conformity with the Universal Serial Bus communication standards (on the B type USB connector a reception of VBUS supply voltage on USB controller, lines 10 – 14, paragraph [0032]), said first control step is selected at said selection step (triggers the switching of the USB controller to B type, line 13, paragraph [0032]), so as to perform communication between said external unit and said information processing apparatus at said first control step (paragraph [0032]).

- 10. As per claims 4 and 12, Pierre teaches an apparatus and method wherein said connection unit is an AB type connector in conformity with the Universal Serial Bus communication standards, and wherein if a B type connector is connected with said connection unit, it is determined at said determination step that said external unit is said USB host unit (first connector is a B type USB connector, paragraph [0019]).
- 11. As per claims 5 and 13, Pierre teaches an apparatus and method wherein said second control step is a host control step, and wherein if it is determined at said determination step that said external unit is a USB device unit in conformity with the Universal Serial Bus communication standards (A type USB connector routed to the inputs/outputs of USB controller, lines 6-7, paragraph [0033]), said second control step is selected at said selection step (disappearance of signal representative of the appearance of a supply voltage triggers switching to master mode A type connector, lines 7-11, paragraph [0033]), so as to perform communication between said external

Art Unit: 2182

unit and said information processing apparatus at said second control step (paragraph [0033]).

12. As per claims 6 and 14, Pierre teaches an apparatus and method wherein said connection unit is an AB type connector in conformity with the Universal Serial Bus communication standards, and wherein if an A type connector is connected with said connection unit, it is determined at said determination step that said external unit is said USB device unit (second connector is an A type USB connector, paragraph [0023]).

# Claim Rejections - 35 USC § 103

- 13. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 14. Claims 7,8, 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pierre in view of Ying et al. (US Publication Number 2003/0172223, hereinafter "Ying").
- 15. As per claims 7 and 15, Pierre teaches an apparatus and method comprising: an execution status determination step of determining an execution status of said first

Application/Control Number: 10/780,621

Art Unit: 2182

control step and said second control step (monitoring of voltage on pins and receiving inputs of a –data signal and a +data signal, paragraphs [0036-0038]).

Pierre fails to teach a warning step of, if it is determined at said execution status determination step that said first control step or said second control step is in execution, and said control step, selected from said first step and said second control step in correspondence with the type of said external unit determined by said determination step and controlling communication between said external unit and said information processing apparatus, is in execution, giving a warning to an operator of said information processing apparatus, wherein at said selection step, said control unit in execution is selected as said control step of controlling communication between said external unit and said information processing apparatus.

Ying analogously teaches an apparatus and method comprising: a warning step of (busy, paragraph [0034]), if it is determined at said execution status determination step that said first control step or said second control step is in execution, and said control step, selected from said first step and said second control step in correspondence with the type of said external unit determined by said determination step (connected and induced from the data input ends D+ and D-, paragraphs [0030-0032]) and controlling communication between said external unit and said information processing apparatus, is in execution, giving a warning to an operator (displayed as red, yellow and green, paragraph [0040]) of said information processing apparatus, wherein at said selection step, said control unit in execution is selected as said control step of

Art Unit: 2182

controlling communication between said external unit and said information processing apparatus .

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system of Pierre with the above teachings of Ying. One of ordinary skill in the art at the time of the applicant's invention would have been motivated to make such modification in order to be able to clearly tell the user the current situation of the host, in a USB switching environment so the user may operate under a friendlier atmosphere (paragraph [0016]).

16. Pierre modified by the teachings of Ying as applied to claims 7 and 15 above, as per claims 8 and 16, Ying teaches an apparatus and method wherein if it is determined at said use status determination step that said control step in execution has become not in execution (red light displayed when sharer is busy and host can not switch, paragraph [0040]), said control step that has been in execution is selected at said selection step as said control step of controlling communication between said external unit and said information processing apparatus (yellow light displayed when host is not in an online state and no other host is using the USB, paragraph [0040]).

#### Conclusion

17. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aurangzeb Hassan whose telephone number is

Page 9

Application/Control Number: 10/780,621

Art Unit: 2182

(571)272-8625. The examiner can normally be reached on Monday - Friday 9 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Huynh can be reached on (571)272-4147. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
